

**DATABASE SYSTEMS ENGINEERING AND DISTRIBUTED BACKEND
DEVELOPMENT (25CS1302E)****Y25 - 2026-2027 Trimester - 4****Project Abstract Submission Form**

Sec No - 2	Team No-11	Project Title- The Pharmacy E-Commerce with Prescription Validation
-------------------	-------------------	--

1. Abstract

The **Pharmacy E-Commerce with Prescription Validation** is a full-stack web application designed to provide a convenient and secure platform for purchasing medicines online. The system allows customers to browse medicines, search for products, add them to a cart, and place orders. Over-the-counter medicines can be purchased directly, while prescription-only medicines require customers to upload a valid prescription. The system addresses the problem of unauthorized purchase of prescription medicines and inefficient management of pharmacy records. When a customer uploads a prescription, the pharmacist can review and validate it before the corresponding order is approved. The system also maintains medicine stock, customer details, prescriptions, orders, payments, and order status in a centralized database. The application will use **MySQL** as the relational database to maintain consistency and relationships between different entities. The backend will provide APIs for authentication, medicine management, prescription validation, inventory, and order processing, while the frontend will provide an easy-to-use interface for customers, pharmacists, and administrators. The project aims to provide a secure, organized, and efficient online pharmacy system while demonstrating practical implementation of database design, SQL, authentication, API development, and full-stack application development.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030019	VIPPARTHI NAVADEEP	
2520030554	CHERUKUMALLI SAI HIMA SEKHAR	

3. Frameworks / Platforms / Software Used

Since this is a **Full Stack Development** project and the database requirement is **MySQL**, use:

- **Frontend:** React.js, HTML, CSS, JavaScript
- **Backend:** Node.js, Express.js
- **Database:** MySQL
- **API Testing:** Postman
- **Database Design:** MySQL Workbench
- **Development:** Visual Studio Code
- **Version Control:** Git & GitHub
